REPORT ON THREE WEBSITES

Visual review based on the screenshots provided

Introduction

This report reviews three simple, static personal websites: **My Dream Travel List**, **My Little Plant Corner**, and **My Little Book Corner**. The review focuses on visible content, layout, colour choices, usability, and practical improvements. Findings are based on the supplied screenshots; the underlying HTML, CSS, links, and interactive behaviour were not tested.

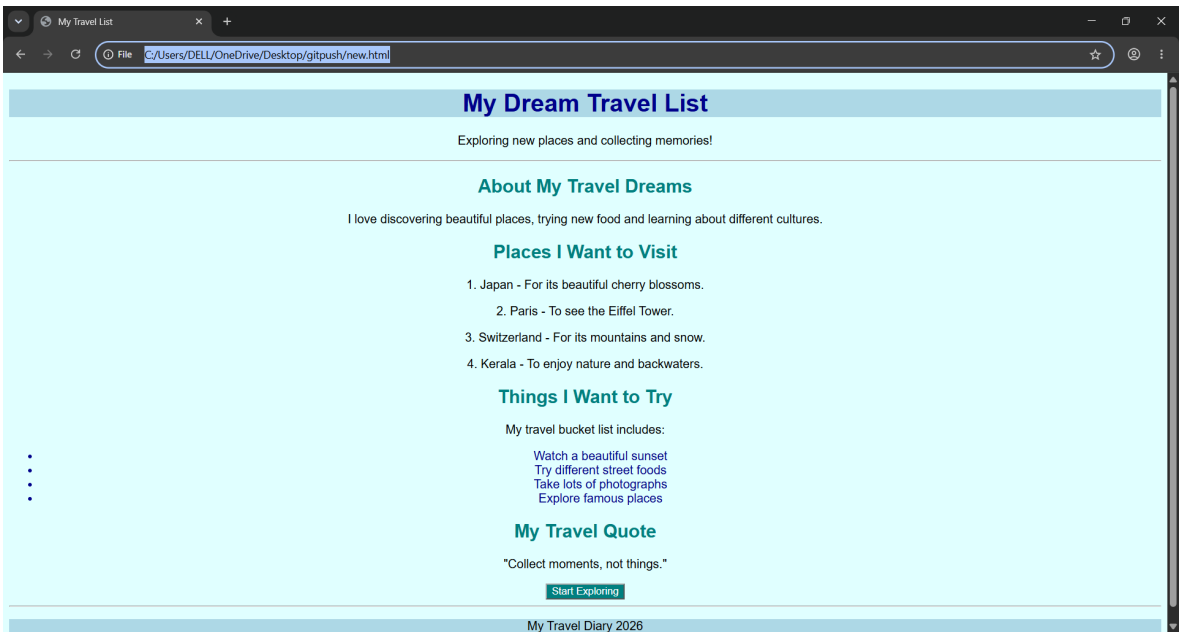

Executive summary

Website	Main purpose	Visual style
My Dream Travel List	Show travel destinations and bucket-list activities	Light aqua background, blue title, teal headings
My Little Plant Corner	Share interest in plants, plant benefits, and care	Soft green palette, plant image, structured table
My Little Book Corner	Present favourite books, reading goals, and a quote	Warm cream background, brown header and accents

Overall, each site has a clear theme and readable content. The plant website includes the strongest visual content structure through its image and table. The main shared opportunities are to improve consistency, spacing, responsive layout, accessibility, and the clarity of calls to action.

1. My Dream Travel List

Purpose: A personal travel bucket-list page that introduces the creator's travel interests and lists destinations and experiences they hope to enjoy.

Visible features

• A centred title, "My Dream Travel List," appears in a blue banner.
• The subtitle introduces the idea of exploring places and collecting memories.
• Sections cover travel dreams, places to visit (Japan, Paris, Switzerland, and Kerala), activities to try, and a travel quote.
• A "Start Exploring" button and a footer labelled "My Travel Diary 2026" appear near the bottom.

What works well

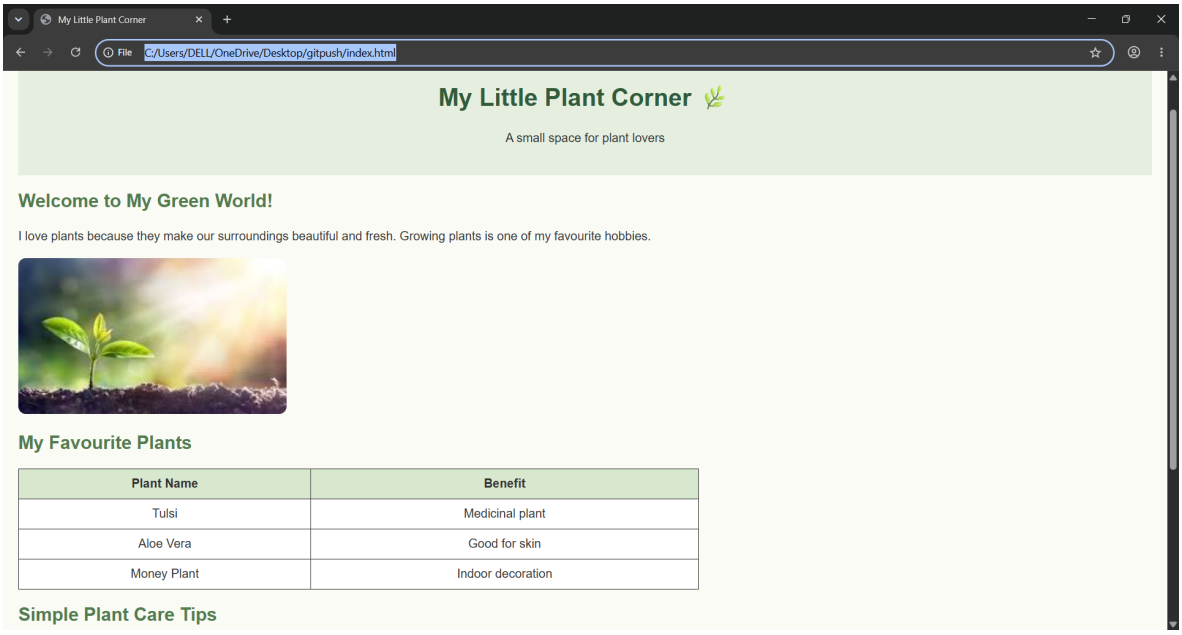

• The page has a clear, easy-to-understand topic and a logical sequence of sections.
• The destination list gives visitors concrete examples of the creator's interests.
• The aqua and teal colours create a bright, calm travel-journal feel.

Recommended improvements

• The activity bullets appear far to the left while the text is centred, suggesting list alignment or container styling should be corrected.
• Use destination photos or small cards to make the places more engaging and easier to scan.
• Make the "Start Exploring" button link to a real section or relevant destination; confirm keyboard focus and hover states.
• Use a responsive content width and consistent spacing so the page remains balanced on smaller screens.

2. My Little Plant Corner

Purpose: A small plant-interest website that welcomes readers, explains the appeal of growing plants, and presents favourite plants and their benefits.

Visible features

• The header uses a pale green background, dark green title, and a leaf emoji.
• A welcome section describes plants as a hobby.
• A seedling photograph provides a visual focal point.
• A two-column table lists Tulsi, Aloe Vera, and Money Plant with a short benefit for each. A “Simple Plant Care Tips” section begins below the visible area.

What works well

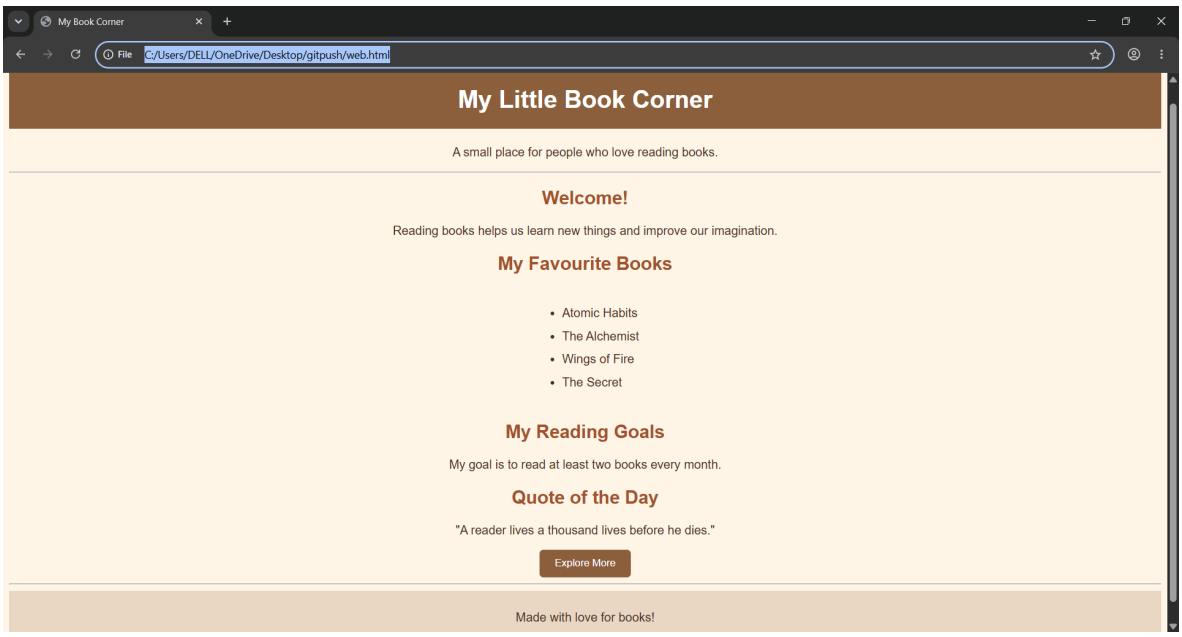

• The green colour palette supports the plant and nature theme.
• The image adds interest and breaks up the text.
• The table is a useful, compact way to compare plant names and benefits.

Recommended improvements

• The content occupies only part of the available desktop width; use a centred max-width container for a more intentional layout.
• Add descriptive alternative text to the plant image for screen-reader users.
• Improve the table on mobile by allowing horizontal scrolling or converting rows into stacked cards.
• Ensure the remaining plant-care section follows the same heading, spacing, and typography system.

3. My Little Book Corner

Purpose: A reading-themed page that introduces a book corner, lists favourite books, states a reading goal, and shares a quote.

Visible features

• A brown header with white title text creates a warm, book-inspired appearance.
• The welcome text explains the value of reading.
• A list names Atomic Habits, The Alchemist, Wings of Fire, and The Secret.
• The page includes a monthly reading goal, a quote of the day, an “Explore More” button, and a footer message.

What works well

• The warm cream and brown palette feels cohesive and suits the subject.
• The sections are clearly labelled and the favourite-books list is easy to understand.
• The reading goal gives the page a personal, purposeful element.

Recommended improvements

• The central content and list could be aligned within a consistent content container for cleaner visual balance.
• Consider adding book-cover thumbnails and optional author names to make the list more informative.
• Give the “Explore More” button a meaningful destination and visible keyboard focus state.
• Check colour contrast for all text and interactive elements, especially smaller text.

Cross-website recommendations

1. Responsive design

Use flexible widths, CSS Grid or Flexbox, and media queries so text, images, and tables adapt to mobile, tablet, and desktop screens.

2. Consistent spacing and alignment

Set a shared content width, consistent margins, and predictable spacing between headings, paragraphs, lists, and sections.

3. Accessibility

Use semantic HTML headings and lists, descriptive image alt text, sufficient colour contrast, visible keyboard focus, and meaningful link/button labels.

4. Functional controls

Test each button and link to ensure it performs the action suggested by its label. Avoid controls that look interactive but do nothing.

5. Content and polish

Keep headings concise, check spelling and punctuation, use relevant images, and maintain a consistent type scale and colour palette.

6. Testing

Preview each page in multiple browsers and viewport sizes; test keyboard navigation and inspect the page for overflow or misaligned elements.

Conclusion

The three websites successfully communicate distinct personal interests through simple headings, short text sections, lists, and theme-specific colours. My Little Plant Corner stands out for combining an image with a comparison table, while the travel and book pages communicate their themes clearly through sections and lists. With improved alignment, responsive behaviour, accessibility, and working navigation, all three could become more polished and user-friendly.

Scope note: This is a visual review of the screenshots supplied on 26 October 2026. It does not verify source code, live deployment, page speed, security, or whether the buttons and links work.
